Research Interests

My research revolves around co-designing **compilers, runtime schedulers and architecture** for **quantum systems** that are correct, efficient, and deployable at scale. My recent focus has been **resource utilization and allocation** in quantum computers across different abstraction layers. Going ahead, I intend to work on problems in compilation for the **fault-tolerant quantum computing** paradigm.

Education

B. Tech.	PES University , Electronics and Communication Engineering GPA: 7.83/10 Upper Division GPA (last two years): 8.24/10 Major Project: Quantum Machine Learning on Photonic Processors.	Bangalore, India 2022 – 2026
-----------------	---	---------------------------------

Research Visits

The Fields Institute , Visiting Researcher (Fully-funded) Thematic Program on Quantum Algorithms for Differential Equations.	Toronto, Canada October – December 2026
--	--

Publications

How Many Shots Does It Take? A Noise-Aware Quantum Resource Allocation Framework.

Prateek P. Kulkarni, Sumit K. Mandal

Proceedings of 31st ACM/IEEE Int'l Symposium on Low Power Electronics and Design (**ISLPED 2026**)

Extended Version Invited to **IEEE TVLSI** [arXiv:2607.24704]

AutoQuREO: An Automated Framework for Quantum Resource Estimation and Optimization.

Harshkumar Oza, Aritra Sarkar, Syed Naqi Abbas, Rahul Bhowmick, Aryan Prakash, **Prateek P. Kulkarni**, Krishna Kumar Sabapathy

Under Submission (**Preprint 2026**) [arXiv:2608.12936]

Research Experience

Indian Institute of Science , Walmart Predoctoral Fellow Advisor: Prof. Sumit K. Mandal, Dept. of CSA	Bangalore, India July 2026 – Present
---	---

- Built a runtime scheduling framework for multi-tenant quantum systems that aims to jointly optimize qubit placement & circuit execution timing to reduce inter-circuit crosstalk on shared quantum hardware.
- Designed a hybrid heuristic-SMT scheduler achieving up to **2.75×** fidelity improvement and **1.9×** throughput gain over state-of-the-art baselines on real quantum devices, with **< 2%** runtime scheduling overhead.

University of Cambridge , Research Assistant Advisor: Prof. Prakash Murali, Dept. of CS	Remote April 2026 – Present
---	--------------------------------

- Designed a compiler abstraction for efficient embedding of qLDPC codes (Gross family) onto constant-degree coupling maps, via graph factorization, compatible with present-day hardware.
- Achieved up to **60%** reduction in coupling degree and up to **3.5×** shorter long-range couplers over state-of-the-art baselines (with provably-optimal bounds).

Fujitsu Research India , Research Intern Advisors: Dr. Aritra Sarkar and Harshkumar Oza, Quantum Lab	Bangalore, India April – June 2026
--	---------------------------------------

- Developed compilation adapters and resource estimation models for AutoQuREO, a proprietary quantum optimization framework targeting NISQ, EFTQC and FTQC paradigms, enabling the automated analysis of quantum algorithms and identifying circuit-level optimizations to reduce execution overhead.

Hardware-Aware Resource Allocation for Noisy Quantum Devices (ISLPED 2026):

- Developed analytical models relating shot count to success probability, circuit partitioning, and resource allocation in noisy settings; **>95%** accuracy on real quantum devices.
- Proposed a variance-aware shot allocation strategy that reduces estimation error by **63%**, over-provisioned shots by **58%**, and energy consumption by **60%** across benchmarks.

Coupling Map Design via Spectral Graph Theory (3rd Prize, ACM SRC at MICRO 2025):

- Built analytical models estimating the quantum processor fidelity and execution time from coupling maps and hardware constraints; **> 98%** accuracy on real devices.
- Designed an efficient (polynomial-time) coupling map generation algorithm exploiting the spectral graph structure, improving circuit fidelity by up to **35%**.

Selected Talks and Poster

Invited Talk, Hardware-Aware Resource Allocation for Noisy Quantum Computers QuCS, September 2026
Poster, Entanglement-dependent Error Bounds for Hamiltonian Simulation ECCC, TQC 2026

Selected Projects

Quantifying Compiler Pass Contributions in Quantum Transpilation PassProbe

- Developed a framework to analyze the contribution of individual transpiler passes in quantum compilation pipelines across $\sim$ **35k** compilations and **4** compilers.
- Applies concepts from cooperative game theory (Shapley values) to estimate the impact of individual compiler passes on circuit quality.

Subsystem Logical Clifford Synthesis SubLCS

- A generalization of the Logical Clifford Synthesis framework of Rengaswamy et al. (IEEE TQE 2020), from stabilizer codes to subsystem stabilizer codes.

Relevant Technical Skills

- **Languages:** Python, Matlab, (some) L $\forall$ N
- **Platforms and Tools:** Qiskit, Cirq, CUDA-Q, Stim, Qualtran, Quimb, QuTiP.

Academic Service

- **Reviewing:** IEEE TQE 2025, ISLPED 2026, ICML AI4Math Workshop 2026
- **Artifact Evaluator:** PACT 2026, SOSP 2026, HPCA 2026
- **Teaching Assistant:** Quantum Transport and Logic Gates, PES University, 2025.

Awards and Honors

- **3rd Prize**, ACM Student Research Competition at **MICRO 2025**, Undergraduate Category.
- **SPARKS Predoctoral Research Fellowship 2025**, Dept. of CSA, IISc, 1/5 positions nationally.
- **Indian National Academy of Engineering (INAE) Mentee 2026**, 1/60 positions nationally.
